

API Spec. Upgrade Package

Field Installable

Upgrade your existing equipment to meet current specifications.

The package includes dual remote panels with pressure read back gauges, annular regulator control, alarm condition indication, and lighted valve position indicators.

Replacement failsafe annular regulators or failsafe operators for existing regulators.

The shuttle assembly with transmitters bolts to existing junction plate, greatly reducing field installation time.

The Alarm box is mounted on the reservoir. A float switch for low fluid level alarm is installed into side of reservoir. Position indicators installed on each function valve. Custom guards are available for Blind/Shear Ram valve.
